

Day 3 - Agenda

✓ Lab = 1 hr = 'Custom Agent'

- ✓ Governance, Safety, Enterprise Considerations
 - ✓ Resources for staying current with GitHub Copilot
- 40-45 min

→ Capstone Project — Teams / Individual

Governance, Safety & Enterprise Considerations

- ⇒ ① Code/Data Provenance & "Licensing Awareness"
- ⇒ ② Keep the PII Protection (Copilot proposes → Dev evaluates)
- ⇒ ③ Responsible AI usage → Tests validate → Review approves
- ✓ ④ What GitHub Copilot can Do & CANNOT Do
- ⑤ Common Risks — Recognize
- ⑥ Enterprise Governance Model
- ⑦ Topics Managed Outside the Engineering Team

Copilot can help with

- ✓ Generate code suggestions
- ✓ Explain / Refactor code
- ✓ Generate unit tests
- ✓ Suggest fixes for errors
- ✓ Generate Documentation
- ✓ Assist with repetitive coding
- ✓ Suggest APIs & Lib
- ✓ Identify possible vulnerabilities
- ✓ Accelerate Development

Copilot cannot guarantee

- ✗ Correct code
- ✗ Accurate explanation every time
- ✗ Optimal Architecture
- ✗ Complete Test coverage
- ✗ Correct the root-cause
- ✗ Accurate Business Requirements
- ✗ Compliance with company policy
- ✗ That APIs actually exist / are current
- ✗ Complete Security Analysis
- ✗ Production Readiness

3 layers of Enterprise Governance Model

- ① Developer Responsibility ✓
→ Review code, validate the correctness, Testing, protecting sensitive Information, secure Development standards.
- ② Team Responsibility (Leadership) ✓
Coding standards, PR requirements, Approved Technologies, Testing expectations, Copilot-Instructions, Acceptable Dev workflow
- ③ Org Responsibility
Security, Legal, Compliance, Risk, etc.

Group A ✓

Dipak
Pritee
Mustafa

(5 min) → PY
"CSV Cleaner"

Capstone Project - Name

Group B ✓

Utkarsh
Subharish
Krishna

Mini Task (Node.js)

Group C ✓

Sai
Kiran
Jayant

[Mini Task (Node.js)]
